Did you know that 33% of LSE students spend their free time on their mobile devices.

No. But I do know that the biggest reason that LSE students want their own phone is so they can play apps.

The #1 reason for 53% of LSE parents to get a phone is so they can call. Which is weird because 83% of parents think texting is more convenient than calling.

Most students bring their phone to school in case of emergencies.

THE FACTS

Did you know that 14% of LSE students send more than 31 texts a day.

100% of LSE parents have a mobile device.

65% of LSE students get their first device at 9 or younger.

When on their mobile device, 60% of LSE parents are using social networking apps and only 35% are on working apps.

88% of LSE students spend the most time on their device after school then on the weekends!

My Conclusion

I think that 4th- 5th graders are getting more devices at younger ages based on these facts, 65% of students got their first device at 9 or younger and 75% of students have their own cell phone. I think this is leading to using too much data.

Kids and Parents  their devices!
