Lake Sybelia Elimentary STUDENT DATA USE

Does the average LSE kid spend too much time on their devices?

54% of LSE parents spend 46 or more minutes on their moble device.52% of LSE students spend the same amount of time on thier devices. Coincedence? I think not.

Is it worth it?

Data isn't cheep! 27% of LSE families pay $150-$200 a month!

100% of LSE adults have a moble device and 74% of LSE students have thier own device.

Age increse !

26% of adults got thier first moble device at 20-25 years old. 54% of students got thier first moble device at 9 years old or younger!

I conclude that parents phone habits are rubbing off on thier children.
