Dear Family,

During the next few weeks, our math class will be learning about multiplying by 1-digit whole numbers. We will investigate strategies for multiplying 2-, 3-, and 4-digit numbers by the numbers 2–9.

You can expect to see homework that provides practice with multiplication by 1-digit numbers.

Here is a sample of how your child will be taught to multiply by a 1-digit number.

**MODEL** Multiply by a 1-Digit Number

This is one way we will be multiplying by 1-digit numbers.

**STEP 1**

Multiply the tens.
Record.

\[
\begin{array}{c}
26 \\
\times \frac{3}{60} \\
\end{array}
\]

\[
3 \times 2 \text{ tens} = 6 \text{ tens}
\]

**STEP 2**

Multiply the ones.
Record.

\[
\begin{array}{c}
26 \\
\times \frac{3}{60} \\
18 \\
\end{array}
\]

\[
3 \times 6 \text{ ones} = 18 \text{ ones}
\]

**STEP 3**

Add the partial products.

\[
\begin{array}{c}
26 \\
\times \frac{3}{60} \\
18 \\
\end{array}
\]

\[
60 + 18 = 78
\]

**Tips**

Estimating to Check Multiplication

When estimation is used to check that a multiplication answer is reasonable, usually the greater factor is rounded to a multiple of 10 that has only one non-zero digit. Then mental math can be used to recall the basic fact product, and patterns can be used to determine the correct number of zeros in the estimate.

**Vocabulary**

**Distributive Property** The property that states that multiplying a sum by a number is the same as multiplying each addend by the number and then adding the products.

**Partial products** A method of multiplying in which the ones, tens, hundreds, and so on are multiplied separately and then the products are added together.
Querida familia,

Durante las próximas semanas, en la clase de matemáticas aprenderemos a multiplicar números enteros de un dígito. Investigaremos estrategias para multiplicar números de 2, 3 y 4 dígitos por números del 2 al 9.

Llevaré a la casa tareas para practicar la multiplicación de números de 1 dígito.

Este es un ejemplo de la manera como aprenderemos a multiplicar por un número de 1 dígito.

**MODELO** Multiplicar por un número de 1 dígito

Esta es una manera en la que multiplicaremos por un número de 1 dígito.

**PASO 1**
Multiplica las decenas.
Anota.

\[
\begin{align*}
26 & \times 3 \\
\text{60} & \leftarrow 3 \times 2 	ext{ decenas} \\
& = 6 	ext{ decenas}
\end{align*}
\]

**PASO 2**
Multiplica las unidades.
Anota.

\[
\begin{align*}
26 & \times 3 \\
60 & \text{18} \leftarrow 3 \times 6 	ext{ unidades} \\
& = 18 	ext{ unidades}
\end{align*}
\]

**PASO 3**
Suma los productos parciales.

\[
\begin{align*}
26 & \times 3 \\
60 & + 18 \\
\text{78}
\end{align*}
\]

**Vocabulario**

**Propiedad Distributiva** La propiedad que establece que multiplicar una suma por un número es lo mismo que multiplicar cada sumando por el número y luego sumar los productos

**productos parciales** Un método de multiplicación en el cual las unidades, las decenas, las centenas y así sucesivamente, se multiplican por separado, y después se suman sus productos

1. Julia saw 5 times as many cars as trucks in a parking lot. If she saw 30 cars and trucks altogether in the parking lot, how many were trucks?
   \[
   6 \times t = 30; \ t = 5; \text{ Julia saw } 5 \text{ trucks.}
   \]

2. Ivan has 6 times as many blue beads as red beads. He has 49 red and blue beads in all. How many blue beads does Ivan have?
   \[
   7 \times r = 49; \ r = 7; \ 6 \times 7 = 42; \text{ Ivan has 42 blue beads.}
   \]

3. There are 6 rows with 18 chairs in each row. In the center of the chairs, 4 rows of 6 chairs are brown. The rest of the chairs are blue. How many chairs are blue?
   \[
   (6 \times 18) - (4 \times 6) = n; \ 84 = n; \text{ There are 84 blue chairs.}
   \]
Lessons 2.7, 2.10 - 2.11

Estimate. Then record the product.

1. Estimate: ________

   \[ 318 \times 3 \]
   \[ 954 \]

2. Estimate: ________

   \[ $522 \times 9 \]
   \[ $4,698 \]

3. Estimate: ________

   \[ $36 \times 6 \]
   \[ $216 \]

4. Estimate: ________

   \[ 57 \times 8 \]
   \[ 456 \]

5. Estimate: ________

   \[ 3,600 \times 8 \]
   \[ 28,800 \]

6. Estimate: ________

   \[ $9,107 \times 5 \]
   \[ $45,535 \]

Lesson 2.8

Find the product. Tell which strategy you used.

1. \((4 \times 10) \times 10\) ________

2. \(2 \times 898\) ________

3. \(4 \times 7 \times 25\) ________

Possible strategies are given.

Subtraction Commutative Property

Lessons 2.4, 2.12

1. School pennants cost $18 each. Ms. Lee says she will pay $146 for 7 pennants. Is her answer reasonable? Explain.

   Possible answer: the answer is not reasonable because it is not between the estimates of $70 and $140.

2. Caleb draws 14 dogs on each of 4 posters. He draws 18 cats on each of 6 other posters. If he draws 5 more dogs on each poster with dogs, how many dogs and cats does he draw?

   184 dogs and cats
